

Quality Management Solutions

A Trusted and Experienced Quality Solutions Partner

As the healthcare market continues its shift to value-based payment models, new federal mandates linking electronic reporting to reimbursement have accelerated the demand for new solutions for gathering and reporting the data used to measure value and provider performance. By the end of 2017, up to 30% of Medicare reimbursement will be made through incentive-based models, and up to 85% of the remaining fee-for-service reimbursement will also have ties to quality metrics.

For over two decades, more than 600 hospitals and health systems have partnered with Quantros to satisfy ever-changing requirements for quality measures reporting. While quality reporting programs will gradually shift from chart-abstracted to electronic clinical quality measures (eCQMs) over the next 2-3 years, Quantros immediately stands ready to support our customers through this transition and to avoid penalties for non-compliance in 2017 and beyond.

Quality Management Solutions Suite

Delivered in a secure Software-as-a-Service (SaaS) environment, the Quantros® Quality Management Solutions (QMS) Suite is designed to optimize quality data collection, processing, analysis, and submission for both chart-abstracted and electronic clinical quality measures, helping you focus on what's most important -- improving patient care and maximizing reimbursement.

Regulatory Reporting Manager and CareTracks® eCQM can be leveraged in tandem to meet the reporting requirements for the CMS's hospital inpatient quality reporting programs and for Meaningful Use, as well as The Joint Commission ORYX® Performance Measures Programs. Both solutions reduce the burden of chart abstraction by minimizing manual data entry, while also reducing the chance for error and the costs associated with the data collection process for both chart-abstracted measures and eCQMs.

- Quantros is on The Joint Commission's list of acceptable ORYX® vendors available for electronic submissions to CMS and The Joint Commission
- [Click here](#) for certification details including costs and limitations regarding Quantros' CareTracks quality management and performance analytics solutions for electronic clinical quality measures (eCQM).
- Support for data in both QRDA as well as a Custom formats for measure processing and preparation for regulatory submission
- Measure mapping for accurate eCQM calculations
- Comprehensive data quality analytics for more efficient error remediation
- Performance Dashboard provides valuable insight into Measure Performance, Individual Measure Details, Patient Lists per Measure and Patient Details

- Quantros is included on The Joint Commission's list of acceptable ORYX® vendors available for chart-abstracted Core Measures Reporting to The Joint Commission and CMS clinical quality measures
- Upload clinical data and universal billing elements to reduce abstraction
- Dynamic sampling that enables abstraction prior to the entire month being uploaded
- Comprehensive reporting capabilities at the corporate, facility and physician level
- QI Registry submission support
- AHA Get with the Guidelines program, STS Cardiac Registry, ACC-NCDR CathPCI Registry, and many others

“

Regional One Health is working hard to become the hospital of choice in our community and the Quantros Regulatory Reporting Module is key in sharing compliance data with our clinical providers as we strive to advance clinical quality. Quantros allows us to deploy an aggressive approach for establishing, monitoring and exceeding established quality standards using real-time data reporting through the use of scorecards.

Advanced Performance Improvement Analytics

Quantros® Quality Management Solutions provides advanced measures compliance and analytics capabilities that enables hospitals and ambulatory care providers to report accurately and also to directly improve their quality of care. Measures can be segmented based on a broad range of criteria including program, setting, role, department, physician, patient, condition and reporting period. Users can drill-down into a specific measure to view details of the calculated results such as lists of all patients and encounters that qualified for that measure, and also to identify measure exception and exclusions. The Quantros QMS also provides detailed analytics so users can track performance for multiple facilities and for multiple time periods to better compare and understand trends.

Preparing for the Transition – Strategic Services

Our team of experts draw upon decades of experience helping clients collect, monitor and analyze clinical quality measures data. The following strategic services are available to help ensure your hospital or health system is fully prepared for the transition to electronic quality measures reporting.

- **Technical Readiness Assessment**
 Evaluate your organization's processes and information systems for capturing the data for electronic clinical quality measures (eCQMs) in alignment with TJC, CMS and other QI registry requirements.
- **Data Integrity and Remediation Profiling**
 Review and compare performance of your chart-abstracted measures and eCQM data to assist with data validation and integrity prior to submission.
